- Additional information: The lists that were valid during the compilation were used as basis.

- 8.2 Exposure controls
  - Personal protective equipment
    - General protective and hygienic measures
      - Keep away from foodstuffs, beverages and food.
      - Instantly remove any soiled and impregnated garments.
      - Wash hands during breaks and at the end of the work.
      - Avoid contact with the eyes and skin.
    - Breathing equipment:
      - Not necessary with efficient local exhaust. If exposition to vapours is possible, use breathing protective mask (filter A).
    - Protection of hands:
      - If skin contact cannot be avoided, protective gloves are recommended to avoid possible sensitization.
      - Solvent resistant gloves
      - The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
      - Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation
    - Material of gloves
      - The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
    - Penetration time of glove material
      - The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be observed.
    - For the permanent contact of a maximum of 15 minutes gloves made of the following materials are suitable:
      - Butyl rubber, BR
      - Fluorocarbon rubber (Viton)
      - Nitrile rubber, NBR
      - Chloroprene rubber, CR
    - Eye protection: Safety glasses
    - Body protection: Light weight protective clothing
